

CITY OF UNION GAP

WATER DEPARTMENT

PUBLIC SERVICE ANNOUNCEMENT

Effective **October 20, 2014 thru November 7, 2014** the City's Water Department will be conducting maintenance activities on the water system. Maintenance is completed by methodically flushing water through the fire hydrants to remove naturally occurring sediment from the water mains. The sediment is manganese and iron oxides, and are non-toxic.

While the City is flushing the hydrants, users may observe periods of discolored tap water, which may last several hours. To minimize the potential impact to the user, Union Gap will flush the hydrants between the hours of **6:00 a.m. to 3:00 p.m.** It is anticipated that water discoloration will not impact the majority of Union Gap's water users.

In order to have drinking water available, in the event of discoloration, you may want to keep a container of clean tap water in the refrigerator.

If users need to obtain water, during this time period, check the cold tap water every hour. If discolored, run the cold tap water for five (5) to ten (10) minutes to determine if the water has cleared; wait for the tap water to clear prior to using.

IF DISCOLORATION IN YOUR WATER SERVICE IS EXPERIENCED.....

DO NOT:

- Use water; this will prevent discolored water from being drawn into the water service.
- Wash laundry; the sediments may stain clothing.
- Operate a dishwasher; minor amounts of sediment may be drawn through the dishwasher.
- Operate a water purifier; operation may cause it to clog or plug the filter device.

Thank you in advance, for your assistance and patience during this necessary maintenance project. If special needs exist, users are asked to please contact the Public Works & Community Development office at 509.225.3524 during regular business hours.
